

Thinking of ways to enrich your Research?

Need advice on how to go about it?

Why not consider including imaging in your project?

The ACRF Clinical Imaging Facility (CIF) located on site here at Perkins North provides you with the opportunity to enhance and add value to your research.

We have a state of the art suite of imaging equipment, including MRI, PET/CT and SPECT/CT, co-located in the CIF within the Bioresources Facility. CIF staff will help you design your imaging project, and we even do the scanning for you as part of our service!

In order to introduce you to the CIF, and the services we offer, we are organising Drop in Imaging (DII) Sessions over the coming months, leading up to the Grant Application season.

At the times noted below, Dr Liesl Celliers, our expert consultant in Radiology (MRI) and Nuclear Medicine (PET and SPECT), will be available to discuss with you your research requirements and advise you on how to include imaging in your grant application. Also on hand will be one of the imaging technologists to answer any practical questions and/or A/Prof Ros Francis (Nuclear Medicine/PET physician, QEII)

When:

Tuesday 11 October 2pm – 3pm

Tuesday 25 October 11am – 12pm

Where:

Level 8 small meeting room – ask at Reception.

Any Questions?
