

Knowledge Translation

Planning for impact and implementation of research outcomes

Friday, 20 July 12:30 – 1:30PM

Knowledge Translation is a vital consideration for all research and having a plan from the outset is increasingly important for research projects.

KT refers to how we exchange, disseminate and apply our research results to improve the community's health. This seminar outlines what it is, why it is so important, and how to get started. It will provide an overview of KT considerations for research project design, implementation, dissemination, and measuring impact.

Dr Fenella Gill

Dr Fenella Gill is a Nurse Researcher at Perth Children's Hospital and a Adj Associate Professor at Curtin University.

Dr Gill was awarded a NHMRC (TRIP) Translating Research into Practice Fellowship 2015-2016, which involved training in knowledge translation and implementation science methodologies and undertaking knowledge translation research. She leads a program of research focusing on patient and family experience and patient safety in hospital.
